

Beginner Level:

Space Debris

Multiple Choice and Matching (Basic Understanding)

Instructions: Read the passage below and answer the questions.

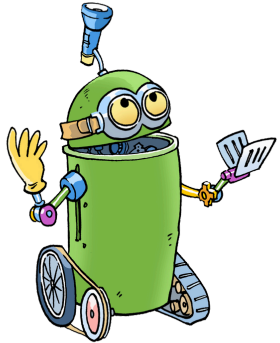

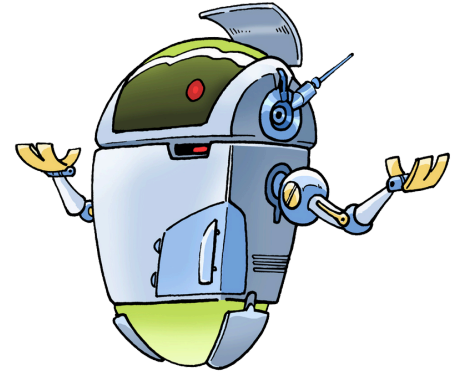

Space debris, also called space junk, is made up of old satellites, broken parts of rockets, and other objects that humans have left in space. This debris orbits Earth and can sometimes crash into working satellites, causing damage. Scientists and engineers are working on ways to clean up space junk to keep space safe for future missions.

Questions:

What is space debris?

- a) New satellites**
- b) Pieces of old spacecraft and rockets**
- c) Stars in space**
- d) Space rocks**

Why is space debris a problem?

- a) It makes space look messy**
- b) It can crash into satellites and cause damage**
- c) It stops astronauts from going to space**
- d) It makes the sky darker**

Match the words to their meanings:

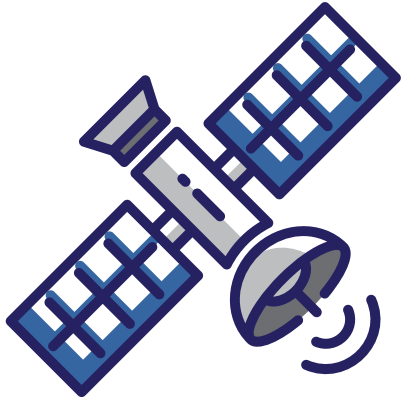

Orbit → a).....

Satellite → b)

Debris → c)

Engineer → d) A person who designs and builds things

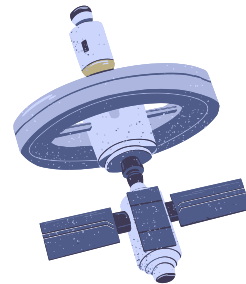

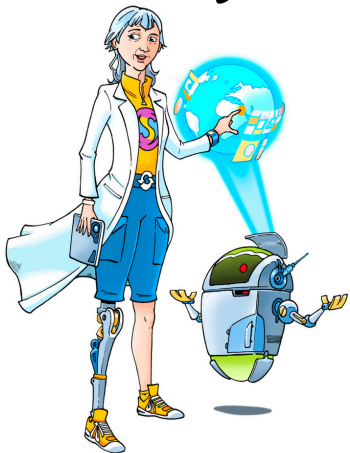

.....

A person who designs and builds things

Objects that circle around Earth

Broken pieces of objects

Machines in space that send signals to Earth
